TYRE CHANGER SA 400 F

Super automatic tyre changer - NO CONTACT

Code: **ASM01XSXX0187**

New automatic tyre changer with “leverless” technology for cars, Suvs and commercial vehicles up to 28” wheels. New assembly and disassembly tool that never touches the rim and in its operation reduces the stress on the tire. Tool with manual rotation to speed up work operations.

Technical solutions:

- Full-motion wheel lifter from ground to wheel in working position, stalling performed with two specular stalling discs with controlled penetration control, automatic wheel locking with effective pneumatic system, fast and simple.
- A console that contains all the work controls to allow the operator to work in maximum ergonomics and effectiveness.

All this translates into greater operating speed without risks for the operator and the rim even during the most demanding work phases, great ease of use and universality of wheel types. All for an equipment that can be exploited to 100% of its enormous potential work.
