**TYRE CHANGER SM BIKE SL -
MOUSSE**

Code:

The SM BIKE is an automatic PROFESSIONAL tire changer, designed and created for the assembly/disassembly of tires from motorcycles, scooters, go-karts and ATV (quad). The latest generation self-centering plate has a locking capacity that allows to tighten rims from 4" to 26". Thanks to 5 different positions of the claws, easily selectable without the use of tools. For rims from 6" to 16" a special ATV adapter kit is recommended. The plate jaws were made specifically to avoid damaging the rims of motorcycles, as was the particular shape of the bead breaker turret. Easy to use, supplied with plastic protections, tire changer lever, grease brush. Complete with lateral bead breaker which makes it very solid during transport.

TOSI SNC

The version with KITMOUSSE is unique in its kind and allows you to remove cross and enduro tires easily and quickly. The technical measures are the result of continuous and constant collaboration with teams and motorcycle services. Thanks to the possibility of inverting the jaw control pedal you have very precise control of the locking of the rim on the self-centering.
