LIFT SE500 12V

Code:

The SE 500 professional lift is a state-of-the-art electro-hydraulic bench for motorcycles and scooters, boasting a capacity of 500 kg, powered by a high-performance 12V Lithium Iron Phosphate (LiFePO4) battery. This configuration makes it ideal for the modern workshop, eliminating the need for connections to the mains electricity supply or compressed air. Designed to maximize workshop efficiency, it features a compact electro-hydraulic lifting system, housed beneath the platform to optimize space, and operated by a “dead man’s switch” control. Operational safety is ensured by a high-level mechanical system, which includes a double toothed rack with electric release and an essential integrated “parachute valve”. To facilitate work, the SE 500 comes standard with a low-profile manual clamp and a removable rear trapdoor. The loading ramp, 70 cm wide, is made of anti-slip checker plate steel and features a solid roller sliding system that makes it fully retractable, thus eliminating floor obstruction.
