NITROGEN GENERATOR G 30

Code: **AAZ01XSXX0001**

NITROGEN GENERATOR WITH 3.0 Nm³ / h (3.000 lit / h), designed for the inflation of car wheels and motorcycles. Generators produce nitrogen from fractionated compressed air intake through membrane filters that can separate oxygen molecules from nitrogen. At the output of the generator, the purity obtainable is 95%. To obtain a good initial purity state, inlet compressed air passes through a diluent filter capable of retaining solid and oily particles up to 0.01 micron. It then passes through the activated carbon filter to make outgoing gas free of any kind of steam.
